

Your business **nbn**TM solution finder recommendation

Great news, based on your business needs, you have been recommended the business **nbn**TM Premium Bundle M

This summary of your solution finder recommendation provides you with the right information, so you can chat with a service provider with a better understanding of your specific business needs. It also ensures you're offered the most appropriate retail solutions, based on our wholesale business **nbn**TM Premium Bundle M.

Premium Bundle M

This business **nbn**TM wholesale bundle provides business grade voice and data services to support businesses as they move to the cloud. It includes a higher symmetrical committed bandwidth with capacity for 10 or more high quality voice lines and HD video conferencing. It also offers service providers enhanced service levels to help minimise disruptions.

Committed bandwidth

- 20/20Mbps¹
- Symmetrical download/upload speeds help support applications such as VoIP calls (audio and video), video conferencing, office productivity apps, messaging apps, physical/cyber security, file sharing and CRM tools

Best efforts bandwidth

100/40Mbps¹ required as minimum³

Voice lines

Supports 10 or more voice lines and HD video conferencing

Parallel line installation

If your premises is connected using **nbn**TM FTTB, FTTN or FTTC access technologies, we offer your service provider a discount to install a parallel line during the migration of your services to reduce disruption to your business

Enhanced service levels

- We offer service providers a 12-hour service restoration target (premises in urban areas and remote fixes only) with a 24/7 support operational period as standard with this bundle⁴
- Talk with a service provider about the service levels available to your business and the faster options that may be available at an additional charge. We also offer service providers end-to-end case management for service incidents with business **nbn**TM wholesale products and services

Priority support

- Providers and business **nbn**TM wholesale solutions are supported by **nbn**'s Australian-based business grade workforce and business **nbn**TM Operations Centre (BOC)
- Additional options may include complex site support and personalised appointments (including after hour appointments)⁵

Available on

FTTN⁷, FTTB⁷, FTTC⁷, FTTP

Make time to speak with a service provider about the appropriate retail solutions they may offer your business based on our business **nbn**TM Premium Bundle M

¹business nbn™ wholesale bundle discounts are not available for products supplied via the nbn™ Fixed Wireless or Sky Muster™ satellite access networks. Your experience, including the speeds actually achieved over the nbn™ broadband access network, depends on the technology over which services are delivered to your premises and some factors outside our control (like your equipment quality, software, signal quality, broadband plans and how your service provider designs its network). nbn offers wholesale speeds to service providers. The nbn™ wholesale speed tiers available to your service provider vary depending on the access technology in your area.

²Regardless of the retail service an end user purchases, the actual wholesale speeds delivered by the business nbn™ Enterprise Ethernet product will be less than 1000Mbps due to equipment and network limitations. An end user's experience, including the speeds actually achieved over the nbn™ broadband access network, depends on the configuration over which services are delivered to their premises, whether they are using the service during the busy period, and some factors outside our control (like their equipment quality, software, chosen broadband plan or how their service provider designs its network). If the end user's service provider has not selected a bandwidth in the highest of three classes of service available for business nbn™ Enterprise Ethernet, the speeds they experience may be affected by contention on the nbn™ access network, particularly in busy periods.

³To purchase a Committed Bandwidth tier that forms part of the Premium Bundle M or Premium Bundle L, the service provider must also separately purchase, at a minimum, the Best Efforts Bandwidth tier outlined in the table.

⁴These restoration targets only apply where the fault can be rectified remotely or, for nbn™ Ethernet, where the premises is located in an urban centre, or for business nbn™ Enterprise Ethernet where the premises is located in a metropolitan area. Different restoration targets apply if a premises is located outside urban centres or metropolitan areas (as applicable). Please note also that the restoration targets stated are offered by nbn to service providers, so speak to a service provider about the retail support services available to your business.

⁵nbn provides Priority Support to service providers to support their supply of wholesale business nbn™ products and services to business customers. Speak to a service provider to find out whether Priority Support services may be available to your business.

⁶These timeframes do not apply in some circumstances, including where delivery is delayed for reasons out of our control. Speak to your service provider about what nbn's Delivery Date Promise means for you.

⁷Products with wholesale symmetrical committed bandwidths of 20/20Mbps are not available for all premises connected to the nbn™ FTTN, FTTB and FTTC networks. Please contact your service provider for details of the symmetrical committed bandwidths that are available at your premises.
